# WINDISCH

## Cuando el metal se transforma en una pieza de Arte

Desde 1934, en **Windisch** tenemos un solo objetivo: elevar el metal a la categoría de Arte.

Nuestros fabricados son prácticos, funcionales y con diseños muy atractivos y están concebidos para realzar la belleza de su baño durante muchos años.

Toda nuestra actividad está dirigida a extraer la máxima esencia de los metales para conseguir piezas únicas, dignas del gusto más exigente.

## When metal is transformed into Art

Since 1934, we at **Windisch** have pursued a single core objective: to transform metal into pieces of art.

Our products are practical, functional and with attractive designs they are aimed at enhancing the beauty of your bathroom throughout many years.

All of our activities are aimed at deriving the most from metals in order to create unique pieces that are worthy of royalty.

## Detalles de distinción

Las técnicas de fabricación han ido evolucionando desde nuestra fundación, pero seguimos exigiendo la máxima calidad en todos nuestros productos.

Iniciamos la producción partiendo de materias primas de alta calidad (latón con recubrimientos electrolíticos en cromo y oro de 24 quilates) a las que aplicamos la última tecnología de fabricación.

Cada pieza que sale de nuestros talleres es cuidada en el más mínimo detalle, siendo verificada artesanalmente antes de ser apta para la venta.

## Distinction & quality assurance

Manufacturing techniques have evolved immensely since our company was founded.

However, one thing that remains is our constant commitment towards producing products of the highest quality.

Only the very best materials are used in a manufacturing process (solid brass offered in a 24 k. gold or chrome finish) that incorporates the latest technologies available anywhere in the world.

Sólo las mejores tiendas especializadas del ramo poseen la exclusiva de venta de nuestros productos de reconocido prestigio internacional.

**Windisch.**  
**El detalle que le faltaba a su baño.**

We also place great emphasis on quality control in order to ensure that our products reach you in perfect condition.

**Windisch.**  
**Turn your bathroom into a theatre of extravagance.**

WINDISCH

**Espejos - Mirrors**

# Espejos ópticos - Optical mirrors

En **Windisch** hemos incorporado las últimas innovaciones tecnológicas en la fabricación de nuestros espejos ópticos, para conseguir imágenes de mayor nitidez y aumento. Realizados con el máximo esmero y calidad, están garantizados por tres años.

At **Windisch** we have incorporated the latest technological innovations in the manufacturing of our optical mirrors. In doing so, we have managed to achieve a much better magnification and image clarity. Manufactured with great care and quality, these optical mirrors have a three-year guarantee.

1-1

## La perfección al detalle

La mayoría de espejos cosméticos utilizan un cristal curvo de calidad estándar. Es un cristal muy fino, de 2 milímetros de grosor, fabricado a partir de modificar la concavidad de una masa de cristal a través de un prensado.

Gracias a esta concavidad se obtienen los aumentos deseados: a mayor radio de curvatura mayor es el aumento. En nuestra gama estándar utilizamos los aumentos de 2X, 3X y 5X. Pero para obtener un aumento mayor, como por ejemplo de 7X, el radio de curvatura sería tan grande que no sería viable su utilización en nuestros productos.

Los **espejos ópticos**, que diferenciamos con el acabado **OP** tras la referencia, son fabricados usando técnicas idénticas a las utilizadas para producir lentes de cámaras fotográficas, telescopios o gafas para la visión. La lupa óptica es un cristal más grueso y seguro que el estándar, de hasta aproximadamente 8,5 milímetros, dependiendo del diámetro y del aumento necesario.

A un cristal circular con un grosor uniforme, se le aplican los procesos necesarios para obtener el radio de curvatura preciso, que proporciona el aumento deseado en la imagen reflejada.

Este radio de curvatura queda oculto para el usuario, ya que instalado en el interior de las lunas, tan sólo percibirá un espejo con la superficie totalmente lisa.

El concepto es proporcionar una **imagen reflejada libre de distorsión** en un 100%, sin defectos.

## Perfection in every detail

Most cosmetic mirrors use curved crystal which provides an acceptable standard of quality. Thus, a standard mirror is produced using very fine 2mm-thick crystal.

The magnification can be changed by modifying the concavity of the crystal with a press. The greater the radius, the greater the magnification. In our range of standard mirrors we offer three different magnifications: x2, x3 and x5. For anything greater, such as x7, the radius curve would be too pronounced therefore making it unsuitable for this type of product.

**Optical mirrors** (which have the initials **OP** after the reference number) are, on the other hand, manufactured by employing a completely different technology. It is the same technology which is used in the production of camera lenses, telescopes and, of course, the glasses that people wear.

Starting with a piece of circular crystal, which has a uniform thickness, certain processes are applied in order to achieve a precise curve, which in turn provides the desired magnification in the reflected image.

The curve is hidden from sight as it is behind the mirror's totally flat exterior surface.

In this way we can guarantee that the **reflected image is completely free of distortion** or defects of any kind.

# Espejos con luz - Illuminated mirrors

# WINDISCH

## Reflejos luminosos

Los espejos **Windisch** se adaptan a la perfección en cada ambiente. Dependiendo de la lámpara que utilizan, nuestros espejos ofrecerán una luz más cálida o más fría, con la finalidad de integrarse con la ambientación de su sala de baño.

### 1 - Espejos con Luz Incandescente

Estos espejos incorporan bombillas incandescentes, la bombilla estándar de toda la vida. Funcionan por el paso de la corriente eléctrica a través de un filamento de wolframio, que produce calor y luz. Frente a su bajo coste, tiene el inconveniente del calentamiento elevado que sufre la pantalla tras un largo período de utilización. Se componen de tres lámparas tubulares del tipo E14 220V 10W.

### 2 - Espejos con Luz Fluorescente

Se caracterizan por incorporar bombillas fluorescentes compactas. Funcionan por el paso de la corriente eléctrica a través de un plasma generado por átomos de mercurio, que rebota contra las paredes del tubo revestidas de fósforo y provoca la aparición de luz visible. Dependiendo del fósforo empleado se pueden conseguir diferentes tonalidades de color. Son ideales para su uso en lugares públicos por el poco calor que generan y por su bajo consumo (Low Energy). Precisan, no obstante, de la instalación de una reactancia auxiliar, con lo que se eleva el peso de la pantalla, así como su coste. En estos espejos obtuvimos la marca GS de seguridad eléctrica, otorgada por el prestigioso organismo certificador alemán TÜV. Se componen de dos lámparas fluorescentes compactas del tipo OSRAM DULUX S 7W/11 860 G23.

### 3 - Espejos con Luz Micro-Lynx

Utilizan también bombillas fluorescentes compactas, pero con un nuevo diseño circular y de dimensiones más reducidas. Sus principios básicos de funcionamiento son idénticos al modelo con luz fluorescente, consiguiendo una alta calidad de iluminación al estar uniformemente repartida por el aro, resultando ser el recurso idóneo para la hostelería, por su bajo consumo. El coste de la lámpara es ligeramente más elevado (por incorporar novedades tecnológicas de última generación), aunque conseguimos reducir el peso de la pantalla ya que funciona sin necesidad de reactancias ni transformadores adicionales. Se componen de una lámpara fluorescente del tipo MICRO-LYNX-F de Sylvania 7W/830 GX53.

## Illuminated reflections

**Windisch** mirrors adapt perfectly to any environment. Depending on the type of light bulb used, our mirrors can provide a warm or a cool light, which will suit the kind of atmosphere you wish to create in your bathroom.

### 1 - Incandescent Light Mirrors

These are characterised by the use of incandescent bulbs. The wolfram filament produces both heat and light as the electrical current passes through it. These are the typical everyday low-cost bulbs but they do have one small inconvenience: the high temperatures that the bulbs reach can cause damage after long usage. They require three tubular bulbs (E14 220V 10W).

### 2 - Fluorescent Light Mirrors

These use compact fluorescent tubes. The electrical current passes through a plasma which is generated by mercury atoms. These atoms rebound off the walls of the tubes, which are coated with phosphorus, and in so doing create light. Not much heat is generated in this process, and also different tones of light can be achieved depending on the type of phosphorus used. They are known as low-energy bulbs and are ideal for use in public places. The only inconvenience is that they require a ballast or reactance device to stabilize discharge and current. This increases the overall cost of the appliance and its total weight. These products are marked with the letters GS for electrical-appliance security, which was awarded by the prestigious German certification organization TÜV. They require two fluorescent tubes (OSRAM DULUX S 7W/11 860 G23).

### 3 - Micro-Lynx Light Mirrors

These use compact fluorescent tubes, but with a new circular space-saving design. They work in the same way as normal fluorescent lights but use even less energy and their circular design allows for uniform lighting. They are slightly more expensive than normal fluorescent lights (as with all new technological advances) but, as they do not need additional reactance devices or transformers, they are not as heavy. This type of mirror, because of its low energy consumption and high quality, is ideal for use in large installations such as in the hotel trade. They require one fluorescent tube (MICRO-LYNX-F by Sylvania 7W/830 GX53).

3 ventosas - 3 suction pad

### ¡Atención!

Por favor, fijar solamente sobre superficies lisas, como espejos, cristales, azulejos, etc. La superficie debe encontrarse limpia, libre de polvo o grasas. Asimismo, para mayor adherencia, humedezca con un poco de agua la ventosa.

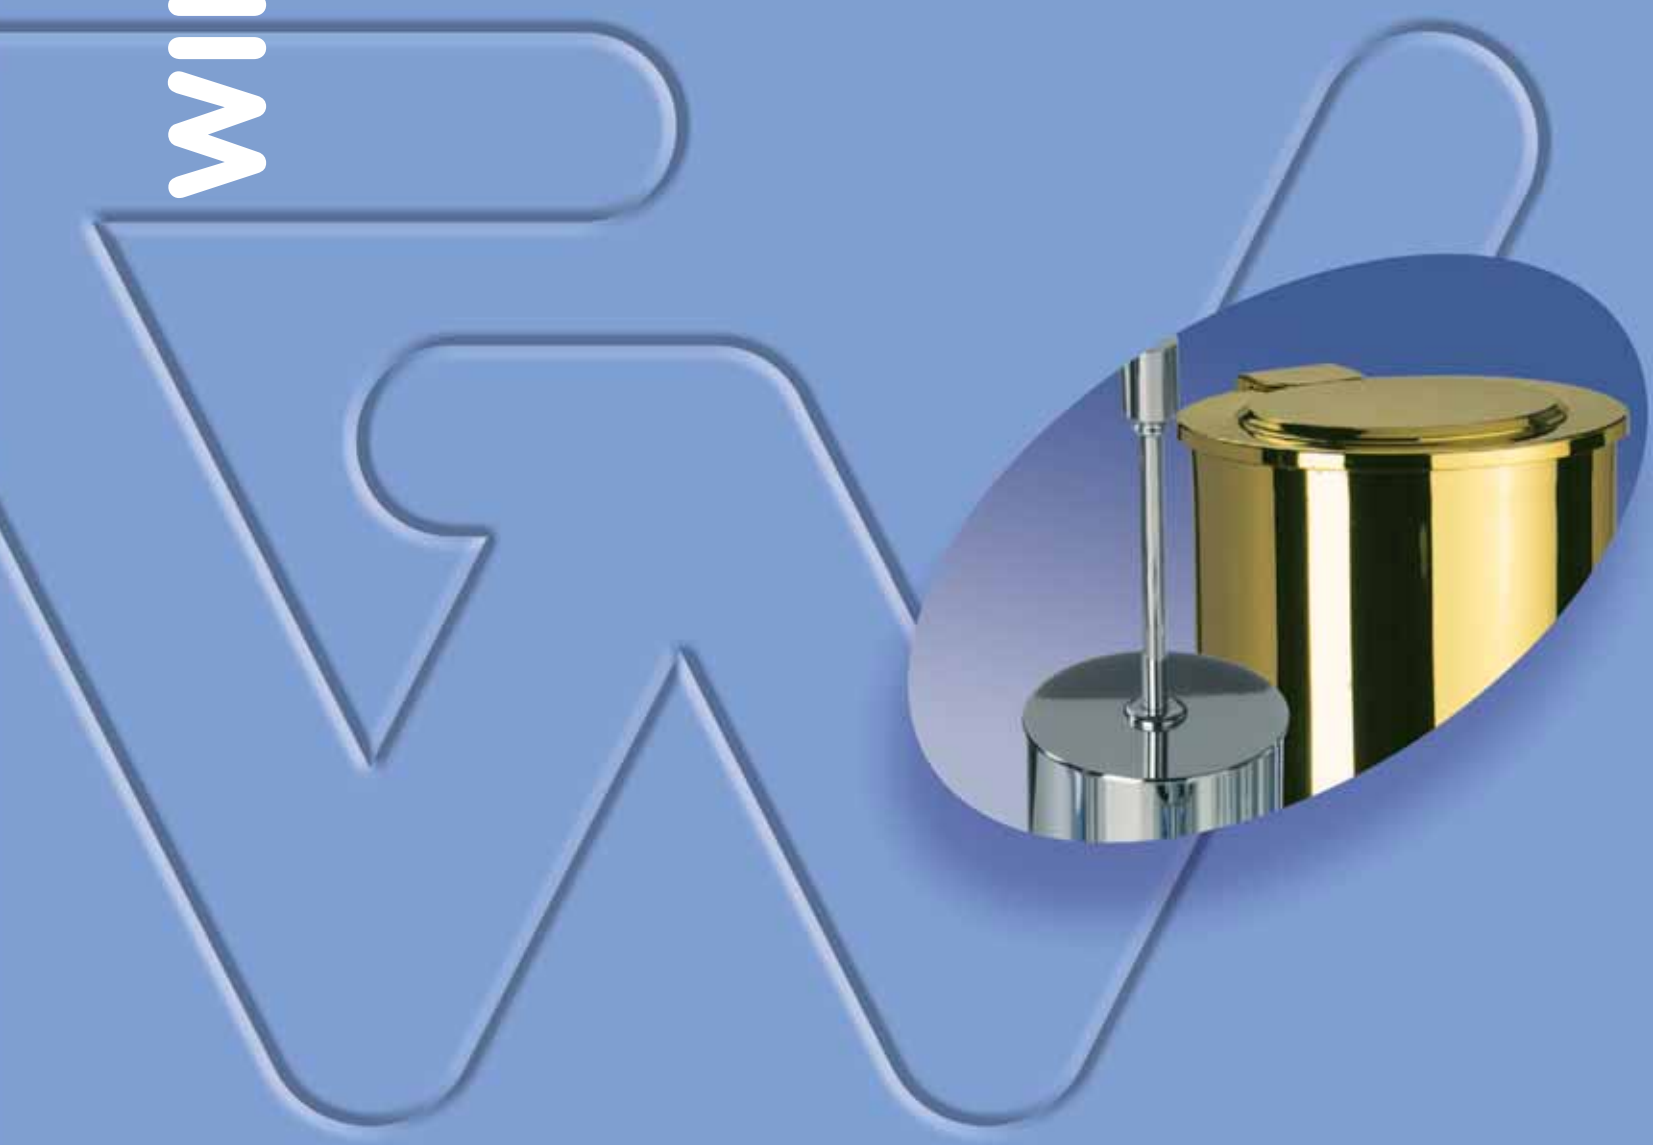

### Important!

Only attach to smooth surfaces such as mirrors, glass, tiles etc. The surface should be clean and free from dust or grease. The suction pad will stick much better if you wet it slightly with water beforehand.
